

**Industrial "V" Series
and
Mobile "VQ" Series
High Pressure Vane Pumps**

When you think of us for vane pumps, chances are you think of the industrial fixed vane pump design that is interchangeable with Vickers, the "V" Series.

It is true that our 20V, 25V, 35V, and 45V series single and double high pressure vane pumps are our biggest pump seller.

And it is true that we also have other industrial pumps; namely the V10, V20, and VPVC.

But what we think is less well known is our "VQ" Series of high pressure fixed vane pumps - the Mobile Series.

We are a manufacturer of industrial hydraulic pumps and valves. Yet the design of the vane pump lends itself to offering the mobile version as well. The difference is in the cartridge kit itself, as both versions use the same housing and shafts.

We assemble the industrial "V" Series with the 12 vane design cartridge kit. It features a low noise rating for industrial machine applications.

The "VQ" version cartridge kit has 10 vanes and redesigned pressure plates, suiting it well for the higher pressure and varying speed demands of mobile applications.

So whichever you need, the "V" or "VQ", we . . .

**THANK YOU FOR THINKING OF US FOR YOUR
HYDRAULIC VALVE AND PUMP REQUIREMENTS!**
